II.2.4) Description of the procurement:
As a result of the CEDR Call 2015 a framework for a European road OTL is available. It provides a framework how to set up a consistent and modular approach for linking data based on modern, proven IT techniques which can be implemented step by step according to the requirements and wishes of an individual CEDR member. The framework is also of use for national or organizational aims regarding connecting data from various sources for a more efficient dataflow. The CEDR Call 2018 builds on this result and aims for a wider implementation
among individual CEDR members with practical results in different use cases. It also explores new territories which are of interest of CEDR members such as scanning and sensor techniques.

Generally speaking there are two main topics of interest of CEDR:

1) information management over the life cycle;

2) extensibility to legacy assets.
